

TINY BEAM FUND SUPPORTED PROJECTS AND WORK

(SINCE ITS FOUNDING IN 2019)

1. Burning Questions Initiative: Fellowships for Individuals

This is Tiny Beam Fund's flagship program. Fellowship recipients are all PhD holders or students close to completing their PhD degree. They work on topics that shed light on "burning questions" asked by staff of non-profit organizations and funders who are trying to understand and find solutions to large-scale/industrial food animal production's negative impacts, particularly concerning low- and middle-income countries. HERE is the 2023 list of "burning questions".

A key deliverable of a fellowship recipient is a "Guidance Memo". This is a report written in plain language aimed at helping these groups deepen their understanding of the issues they have asked in their questions.

Guidance Memos, organized by date

In Progress as of March 2025

Provisional Title	Key topic; country	Authors / Fellowship Recipients
Beekeeper-led efforts to resist pressure to industrialize beekeeping in Mexico, and to maintain small-scale diversified production systems of honey bees	bee farming; Mexico	Maggie Shanahan
Understanding development finance and industrial animal agriculture in Vietnam	animal farming; financing; Vietnam	Brian Cook
Preventing development bank induced industrialization of animal agriculture and the associated greenhouse gas lock-in in low-income countries (LICs)	animal farming; financing; climate change; Sub-Saharan Africa	Divya Narain
Interrogating financial structures of industrial broiler chicken production in low- and middle-income countries (LMICs)	chicken industry; financing; LMICs	Ambarish Karamchedu; Ben Coles
Antibiotics footprint of diets: How and where antibiotics are used, focusing on low- and middle-income countries (LMICs); "hot spots" that should be prioritized	antibiotics use for animal- sourced food production; LMICs	Keeve Nachman; Brent Kim; Aimee Bourey

Completed in 2024

Title	Key topics; country	Authors / Fellowship Recipients
Feeding inequality: The hidden costs of Brazil's meat industry monopoly Click here for key points. Link to download. Link to companion annotated bibliography. (Portuguese version) Alimentando a desigualdade: Os custos ocultos do monopólio industrial da carne Click here for key points. Link to download. Link to companion annotated bibliography.	JBS capital accumulation and workers; Brazil	Raisa Pina
The beef with climate change: Growth, equity, and a just transition in the beef sector in South Africa Click here for key points. Link to download. Link to companion annotated bibliography.	beef industry expansion; South Africa	Andrew Bennie Andrew Bowman
Enhancing farm animal welfare through housing technology certification and alternative farming systems Click here for key points. Link to download. Link to companion annotated bibliography. Link to narrated Powerpoint presentation.	animal welfare; Central & Eastern Europe	Mariann Molnár
Interconnected violences and interconnected resistances: Alliances for resisting meat factories in the Americas Click here for key points. Link to download. Link to companion annotated bibliography.	actions against livestock industry; Latin America	Karen Hudlet Vazquez

Completed in 2023

Title	Key topics; country	Authors / Fellowship Recipients
Effective behaviour change strategies to promote meat reduction in Brazil Click here for key points. Link to download. Link to companion annotated bibliography.	animal-sourced food consumption reduction; Brazil	Brian Cook
Designing a "good life" for livestock: Could gene editing improve animal welfare in low- and middle- income countries?	gene editing of farmed animals; LMICs	Rachel Ankeny; Emily Buddle; Rebecca Paxton
Click <u>here</u> for key points. <u>Link</u> to download. <u>Link</u> to companion annotated bibliography.		

Completed in 2022

Title	Key topics; country	Authors / Fellowship Recipients
Dairy production in India: Animal welfare implications and public perceptions Click here for key points. Link to download. Link to companion annotated bibliography.	dairy production and consumption; animal welfare; India	Jesse A. Robbins
Eek! What the chick: Addressing the issues of industrial poultry in Egypt Click here for key points. Link to download. Link to companion annotated bibliography. (Arabic version) الغذائي معالجة قضايا الدواجن الصناعية في Click here for key points. Link to download directly.	poultry production and diseases; food security; Egypt	Marion W. Dixon
Link to companion annotated bibliography. Egg producer and egg buyer disconnect: Exploring	cage-free eggs production	Ashleigh Bright
barriers and levers to increase cage-free egg production in China Click here for key points. Link to download directly. Link to companion annotated bibliography.	and consumption; China	Asincigii brigiit
The role of major retailers and supermarkets in the transition from industrial animal agriculture to alternative proteins in low- and middle-income countries: The case of Brazil Click here for key points. Link to download. Link to companion annotated bibliography.	plant-based "meat" retail; Brazil	Germano Glufke Reis; Educardo Guedes Villar
The politics of milk: Examining claims about dairy in China Click here for key points. Link to download. Link to companion annotated bibliography.	dairy corporations and marketing; dairy consumption; China	Philip H. Howard
From pasture to compost barns: Smallholder family dairy farmers and the expansion of industrialized animal production in Santa Catarina, Brazil Click here for key points. Link to download.	dairy farming; smallholder farmers; Brazil	María José Hötzel; Luiz Carlos Pinheiro Machado Filho; Matías Hargreaves Méndez
Link to companion annotated bibliography. The path towards CAFO in Argentina: The 2020 Argentina-China agreement and the absence of animal welfare considerations in the intensification of animal agriculture Click here for key points. Link to download. Link to companion annotated bibliography.	pig farms expansion; trade agreement; Argentina; China	Silvina Pezzetta

Supporting high welfare cage-free egg production in China

Click <u>here</u> for key points. <u>Link</u> to download. <u>Link</u> to companion annotated bibliography.

cage-free eggs production; animal welfare; China

Kate Hartcher

Alimentación y Cultura en Argentina: Percepciones sobre dietas basadas en plantas, estigmatización del veganismo y desafíos actuales del activismo para reducir (y terminar) con el consumo de animals

Click <u>here</u> for key points. <u>Link</u> to download. <u>Link</u> to companion annotated bibliography.

(English version) Food and culture in Argentina: Perceptions of plant-based diets, stigmatization of veganism and current challenges of activism to reduce (and end) animal consumption

Click <u>here</u> for key points. <u>Link</u> to download. <u>Link</u> to companion annotated bibliography. meat consumption; vegetarian diet; Argentina

Alexandra Navarro

Completed in 2019

Title	Key topics; country	Authors / Fellowship Recipients
An analysis of value-chains and market development to support the smaller-scale production of pork by ethnic minority women in the Northern Mountainous Region of Vietnam	smallholders pig farming; Vietnam	Aaron Kingsbury; Ha Thi Hoa; Ho Ngoc Son; Kieu Thi Thu Huong
Click <u>here</u> for key points. <u>Link</u> to download. <u>Link</u> to companion annotated bibliography.		

Underestimates of US emissions and global implications for industrializing animal agriculture	livestock production; greenhouse gas emissions	Matthew N. Hayek
Click <u>here</u> for key points. <u>Link</u> to download. <u>Link</u> to companion annotated bibliography.		
Cattle and the climate: Why industrial production is not the solution to emissions from beef and dairy farms	cattle and dairy production; greenhouse gas emissions	R. E. Mason
<u>Click</u> for key points. <u>Link</u> to download. <u>Link</u> to companion annotated bibliography.		

2. Burning Questions Initiative: Research Planning Grants to Universities

These grants are given to university-based researchers interested in planning (or recently started) projects on issues relevant to "burning questions" asked by leaders of NGOs tackling negative impacts of industrial animal agriculture in developing countries.

Name of University	Topic / Theme of Research Project
University of Newcastle	Impact of WTO policies on LMIC animal-sourced food exports to the EU and China. [Researcher: Salvatore Barilla]
Dublin City University	Political economy of environmental problems caused by the animal feed industry in mainland Southeast Asia. [Researcher: Danny Marks]
University of Technology Berlin	Motivational conflict and cultural heterogeneity in meat consumption and plant-centric diets across Latin America. [Researcher: Jonas Ludwig]
Leiden University	What are the environmental and economic impacts on LMICs if there is a dietary shift in HICs away from animal-source foods and toward more plant-based foods? How can conflicts between LMICs and HICs that arise from this shift be eased with strategic international partnerships? [Researcher: Paul Behrens]
University of Bamenda	Fieldwork to measure and analyze greenhouse gas emissions that come from large, industrial animal farms in Cameroon. [Researcher: Ngwa Martin Ngwabie]
University of British Columbia	In emerging economies that are transitioning to large-scale, industrial animal farming systems (particularly those that may apply or have applied for EU membership), what are the pressures from parties embedded in the value chain that drive the animal farming sector in these countries to invest in industrial systems and intensify animal agriculture? [PI: Mariann Molnár. Team member: David Fraser]

Describe and quantify the animal welfare and environmental concerns in each of the hundreds of fish species raised in aquaculture farms, many of which are in low-and middle-income countries. [Researcher: Becca Franks]	the hundreds of fish species raised in aquaculture farms, many of which are in low- and middle-income countries. [Researcher: Becca Franks] New York University Identify networks that support or engage in sustainable agriculture across predominately agrarian low- and middle-income countries - networks that can help to shift away from factory farming and move towards agriculture systems that are more humane and sustainable. [Researcher: Matthew Hayek] New York University An investigative study into the recent interest in various countries (e.g. Mexico,
predominately agrarian low- and middle-income countries - networks that can help to shift away from factory farming and move towards agriculture systems that are more humane and sustainable. [Researcher: Matthew Hayek] New York University An investigative study into the recent interest in various countries (e.g. Mexico, Chile, Spain, China) in developing and financing large-scale farming of octopus. [Researcher: Jennifer Jacquet] Royal Veterinary College A pilot study in the Indian state of Tamil Nadu to test a new research method that can be very useful in identifying links between government food policies and rising consumer demand for chickens and eggs. [Pl: Mehroosh Tak. Team member: Lavinia Scudiero] University of Colorado, Boulder A systematic review of the evidence to assess the efficacy of interventions to decrease consumption of animal-based food in different parts of the world. [Researcher: Peter Newton] University of Edinburgh Confirm preliminary findings of viability of alternative models to industrial poultry operations in Nilgiris region of India. [Researcher: Krithika Srinavasan. Team members: Aaron Gross, Pradeep Kuttuva] University of Adelaide The impact of globalization on industrial agricultural expansion and animal welfare in low- and middle-income countries reliant on halal production practices. [Researcher: Rachel Ankeny] University of Waterloo Financial supports enabling factory farming industry to expand to emerging markets, and viable interventions to impede expansion. [Researcher: Jennifer Clapp] Lille Catholic University Strategies led by small farmers to resist expansion of factory farming in Global South, and mechanisms to learn from each other. [Pl: Brendan Coolsaet. Team	predominately agrarian low- and middle-income countries - networks that can help to shift away from factory farming and move towards agriculture systems that are more humane and sustainable. 3. Kindling Initiative: Grants to Universities

The purpose of Kindling Initiative is to fire up academic researchers and institutions' interest in the negative impacts of industrial animal agriculture, especially concerning low- and middle-income countries – building their capacity within academe, helping them to communicate their research insights and to serve as a trusted voice beyond academe.

Name of University	Purpose of Grant
Royal Veterinary College	To develop Phase 2 of Critical Research on Industrial Livestock Systems (CRILS) network from 2025-27. In particular, to support online workshops, two inperson workshops, and working groups.
Royal Veterinary College	To launch and develop a new network – Critical Research on Industrial Livestock Systems (CRILS) network. In particular, to support an in-person workshop in London in 2024 and a series of seven online workshops in 2023-24.
Royal Veterinary College	To defray expenses of six researchers to attend a conference organized by the International Initiative for Promoting Political Economy. Their panel's title is: "The Political Economy of Animal-Sourced Food Production and Consumption". Papers include: "The political economy of intensified poultry production systems in Bangladesh"; "Using political economy lenses to understand the problem of antimicrobial resistance and its control in Vietnamese aquaculture systems".
Harvard Law School, Animal Law & Policy Program	To cover the stipend of a Visiting Fellowship recipient - an early-career academic specializing in international farm animal welfare with a focus on industrial scale systems in Asia (e.g. China, India). The main work during the fellowship is to build a broad international network of academics in farm animal welfare, and dissemination of her recent research in China to NGOs.
New York University, Center for Environmental and Animal Protection (CEAP)	To hire a graduate student as the center's part-time staff for three years to serve as CEAP's first and only dedicated staff support for administering and disseminating its research, most of which involves animal agriculture in LMICs (e.g. track projects, disseminate projects' findings, serve as the center's webmaster, strengthen collaboration and communication with other universities and NGOs).
Emory University	Use Guidance Memo written by Yulia Chuvileva /Ioulia Fenton (Burning Questions Fellowship winner) on the rise of "industrial chicken" in Guatemala and its negative impact on income generation, public health, food security and justice in the country: 1) As an anchor to rally academics in Guatemala round issues addressed in the report. 2) As the basis for a communications campaign in Guatemala (including translating the Memo into Spanish and disseminating it to groups and indigenous communities working on topics addressed in the Memo). Materials produced with grant funds: Spanish report here , English report here , Spanish infographic here .

4. Fueling Advocates Initiative: Grants to NGOs

These grants are provided to not-for-profit NGOs (non-governmental organizations) to help them make use of academic research and experts to bolster their work in tackling large-scale /industrial animal agriculture in low- and middle-income countries.

Name of Organization	Purpose of Grant
Global Feedback	Commission academics to estimate land use in the Global South by the largest 48 industrial livestock and animal feed companies.
Global Forest Coalition	Use academics in Latin America to review UN agencies' support for large- scale livestock projects, and mentor two local organizations in Latin America.
International Accountability Project	Provide funds to academics to examine industrial animal agricultural projects supported by development banks and public finance stored in the global database "Early Warning System".
World Animal Protection	Re-grant to local organizations that use academics to adapt a white paper on adverse effects of industrial animal agriculture to local context for Brazil and Paraguay in order to support campaigns in these two countries.
Animal Policy International	Provide funds to academics to develop benchmarking frameworks and methodologies to assess the animal welfare standards of imported animal-based foods, and understand the supply chains of these foods, using New Zealand as a case study.
Aquatic Life Institute	Seek assistance from academics to develop templates to collect data from aquaculture associations in Asia, South America, and other regions and evaluate the data (as part of a large-scale comprehensive research project to document and communicate best practices in aquaculture concerning wellbeing of farmed fish and shrimps).
Animal Welfare League [in Ghana]	Request local academics to compare the economic costs of battery cage systems versus cage-free systems in Ghana, and investigate farmers' perception of adopting cage-free systems.
Asociación para el Rescate y Bienestar Animal [in Peru]	Request local academics to collect and analyze data about cage-free /free-range eggs production in Peru, including interviewer farmers, in order to develop this sector.
SDSN (Sustainable Development Solutions Network) Nigeria	Use local academics to collect data for a better understanding of the outgrower model of poultry production in Nigeria - a model that may be a key driver of the recent acceleration in intensive production.
The Humane League, Mexico	Use local academic researchers to undertake a study of Mexican consumers' attitudes, habits, and willingness to pay for cage-free eggs.
Agriculture and Forestry Research & Development Centre for Mountainous Region (ADC)	Partner with local academic researchers to help small-scale ethnic minority female chicken farmers in the northern mountainous region (NMR) of Vietnam who are being harmed economically by new industrial chicken operations.
Animal Equality Mexico	Ask local academic researchers to design and implement a model and information system that reliably estimates the number of animals at each stage of the food animal production cycle in Mexico annually.
